Coding & Solution

Date: 29 September 2026

Team ID: XXXXXX

Project Name: LegalEase – AI-Powered Legal Document Generator

Maximum Marks: 5 Marks

Coding & Solution

This section evaluates the quality and completeness of the implemented LegalEase code and the overall solution. The project demonstrates working functionality, clean code practices, modular design, and alignment with the defined requirements.

Solution Summary

Field	Details
Repository Link / URL	To be added by the team (GitHub / GitLab / hosted repository)
Programming Language(s)	Python
Framework(s) Used	FastAPI, Streamlit
AI / API Technology	Google Gemini API / Generative AI SDK
Key Features Implemented	AI-powered legal document generation; editable document preview; legal document formatting; TXT, DOCX and PDF
Pending / Incomplete Features	Repository link and deployment details are not specified in the provided project document. These can be added when
Setup / Run Instructions	Install Python 3.10+, create a virtual environment, install dependencies from requirements.txt, configure the Gemini AP

Code Quality Checklist

S.No	Criteria	Status (Yes / No)	Remarks
1	Code is modular and organized into functions / classes	Yes	FastAPI routes, Gemini generator, and formatting utilities are separated i
2	Meaningful variable and function names are used	Yes	Names such as document_type, parties, terms, dates, generate_docume
3	Code includes comments / documentation where necessary	Yes	The project documentation explains architecture, activities, setup, functio
4	Error handling is implemented for critical operations	Partial	Pydantic validation is used for API input; additional exception handling ca
5	The application runs without critical errors	Yes	The documented workflow includes local deployment and testing of gene
6	Code is committed to a version control repository	Not Specified	A repository URL is not provided in the supplied project document.

Additional Notes / Comments

• LegalEase uses Streamlit for the frontend and FastAPI for the backend.

• GeminiDocumentGenerator handles AI-powered document generation.

• The application supports editable previews and exports in .txt, .docx, and .pdf formats.

• Document formatting utilities include sanitize_text(), format_docx(), format_pdf(), and format_html_preview().

• The project documentation describes local deployment, testing, and environment-variable configuration.
