PROJECT EXECUTABLE FILES

LegalEase: AI-Powered Legal Document Generator

Date: 15 March 2026

Team ID: xxxxxx

Maximum Marks: 3 Marks

Project Description

LegalEase leverages Generative AI to simplify the creation of legal documents through customizable and editable templates. It supports documents such as employment contracts, lease agreements and NDAs. The application uses FastAPI for the backend, Streamlit for the frontend and Gemini for AI-based document generation. Generated documents can be previewed, edited and exported as TXT, DOCX and PDF.

Step 1: Submission Checklist

S.No	Item to Submit	Status
1	Complete source code (all files and folders)	To be attached
2	README / Setup Guide	Included in this document
3	requirements.txt / dependency file	Included / to be attached
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	To be attached
6	Deployed application URL (if hosted)	NA / Not provided
7	APK / Executable binary (if applicable)	NA
8	Dockerfile / Containerization config (if applicable)	NA / Not provided
9	Test files and test results	To be attached
10	Demo video or walkthrough (if required)	Not provided

Step 2: File / Folder Structure

LegalEase/
■■■ main.py
■■■ routes.py
■■■ app.py
■■■ ai_core/
■ ■■■ gemini_generator.py
■■■ requirements.txt
■■■ .env.example
■■■ README.md
■■■ assets/
■■■ logo / branding files

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not provided
Login Credentials (Demo)	Not provided / Not required in supplied project description
Platform / Hosting Provider	Local deployment using FastAPI + Streamlit; cloud provider not specified
Repository Link	Not provided
Demo Video Link	Not provided

Step 4: Run Instructions

1. Install Python 3.10+ and pip.
2. Create and activate a virtual environment.
3. Install the required packages using requirements.txt.
4. Configure the Gemini API key in the environment configuration.
5. Start the FastAPI backend using Uvicorn.
6. Start the Streamlit frontend using app.py.
7. Enter document type, parties, terms and effective date.
8. Select Generate Document to create the legal content.
9. Preview and edit the generated document if required.
10. Download the result as TXT, DOCX or PDF.

Core Dependencies

fastapi, uvicorn, streamlit, python-docx, fpdf, Pillow, requests, google-generativeai, python-dotenv

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Deployment URL is not supplied in the project material.	Add URL after deployment.
2	Repository and demo video links are not supplied.	Add links before submission if required.
3	API key is required for Gemini integration.	Configure it through environment variables; do not expose the key in sou

Project Functionality Summary

The supplied LegalEase project material describes an AI-powered legal document generator with Streamlit user interaction, FastAPI API endpoints, Gemini integration, editable previews, and export to TXT, DOCX and PDF. The project accepts document type, parties, terms and effective date as inputs.
