LegalEase — Data Flow Diagram

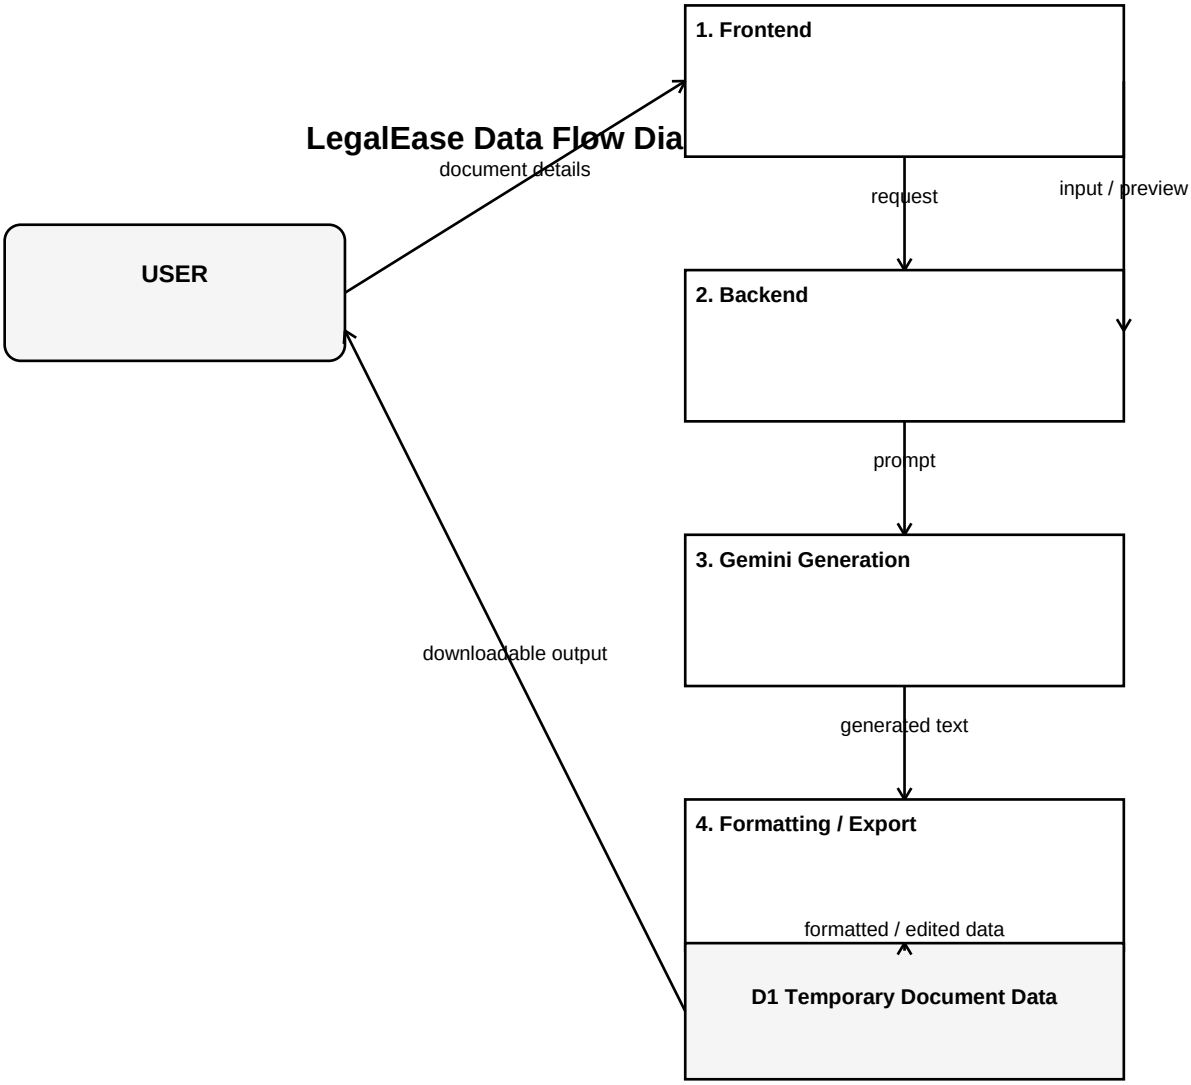
Data Flow Diagram

Date: 15 March 2026

Team ID: xxxxxx

Project Name: LegalEase

Maximum Marks: 2 Marks



The DFD shows how user-provided legal details move through the Streamlit frontend, FastAPI backend, Gemini generation, and formatting/export stages. The temporary document store is conceptual because the supplied LegalEase specification does not identify a persistent database.

LegalEase — DFD Symbol Legend

Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through the LegalEase system between external entities, processes, and data stores.

Symbol	Name	Description
	External Entity	User who provides document details and receives the generated document.
	Process	System activity such as input handling, AI generation, and document formatting/export.
	Data Store	Temporary location for generated/edited document data during the workflow.
	Data Flow	Movement of document details, prompts, generated text, edits, and formatted outputs.

Source alignment

This document follows the supplied LegalEase project description and DFD template terminology.

The project uses Streamlit for frontend interaction, FastAPI for backend requests,

Gemini for AI generation, and DOCX/PDF/TXT formatting and export.
